

Smarter Sheet Refresher

What requirement are we meeting here...

Smartsheet dashboards are loved by all their users and the basis for powerful decisions. However unless the sheets that hold the contributing data are refreshed regularly, the dashboard data can be out of date.

Formulas in sheets are not automatically refreshed until the sheet is opened. This can create some issues when the sheet is used on a dashboard or a reports & the concerned report or dashboard will indeed display out of date information.

So how have we resolved this requirement?

To avoid the issue, sheet refresh can be the solution.

Sheet Refresher Manager is a tool that runs every day.

The program will add a new row at the bottom on the sheet. Doing that, the formulas will automatically be recalculated and the dashboard will always be up to date.

Configuration

The admin sheet stores sheet ids to refresh (one row per sheet to refresh) : This Smartsheet shows the status and can be used in alerts or notifications to give comfort to management to know the data is up to date.
