

## Smarter LaunchPad checklist

Smarter LaunchPad is a tool that automatically create projects from a summary sheet, yet to be used effectively some configuration is needed.

Even before working on the configuration some effort needs to be done by the client to define the input/outputs.

Note : Buy purchasing LaunchPad we're not responsible of converting any existing projects to the new project format.

As any other feature we will need a smartsheet token to be provided. The owner of the token have to a licensed smartsheet user who can read/write all sheets concerned by LaunchPad.

### Templates

Launch pad can support multiple templates for the same summary sheet, these steps have to be replicated for every template.

#### Inputs

On the project to be created : list all fields/columns that need to be filled from the summary sheet: can be cell links or values.

On the summary sheet, double check that all the required fields exists.

#### Outputs

List all fields/columns that need to be filled once the project is created. The outputs can be :

- Sheets, reports or dashboards links.
- Cell values links
- Copy of cell values

### Sample Data

It's way easier to set the configuration if the client can provide a demo row on the summary sheet and a correctly created project.

### Some Limitations

- Launch pad cannot rename or edit reports and dashboards
- Launch pad cannot edit or manage workflows and notifications
- One row on the summary sheet per project to manage
