

Smarter Dashboards

Slice and dice your Smartsheet data with charts, graphs and tables

Analyse your data quickly and easily from one clear source

Smarter Dashboards let you filter and edit data across charts and tables in one dynamic dashboard

What our Smarter Dashboards can do for you

- Lets you **view** any subset of your Smartsheet data in concise, graphical format
- **Drill down** to any data subset by clicking on the relevant graph or chart
- **Edit** data inline within tables

What our Smarter Dashboards can do for you

- **Create** handy, management-ready live snapshots based on any parameters
- **Present your data** with pie and bar charts, multi axis line charts, scatter charts, bubble charts, polar area and more!

USE CASE

- **Create a single view** that will show different data depending on the logged-in user
- Allow users to **edit data** directly within the dashboard, which will then **update** the underlying Smartsheet data

USE CASE

If you have a large amount of data across many Smartsheets, we can **sync these sheets to a SQL database**, and drive the Smarter Dashboard from the database - allowing speedy access to hundreds of thousands of rows of data

USE CASE

If you need to **view data from a secondary Smartsheet** within your Smarter Dashboard, you can **link** this secondary data to the primary data via a key and it will **filter and drill down** in just the same way as the rest of your dashboard
